

CELLULAR FOAMS

Everad® TAC 2020 A + TAC 2013 B

Ultrafast, high-performance bonding

The technology for 2C, water-based contact adhesives

For many years, Everad® has been developing alternatives to the solvent-based adhesives employed in industry. These products are used for bonding various materials such as fabric, felt, fibre and wood. Collano has now mastered this technology in terms of bonding and application materials.

Everad® TAC 2020 A + TAC 2013 B

This water-based, 2C contact adhesive meets processors' stringent demands. This special version is specially designed for bonding:

- On difficult substrates
- In single-side application

Benefits of Everad® TAC 2020 A + TAC 2013 B :

- 100% solvent-free, no VOCs
- Single-side application
- Very high initial cohesion
- Bonding under very high loads and stresses
- Bonding of molded foams (after approval testing)
- Cost optimization
- Very fast setting and fast drying
- High productivity
- Fast process
- Repositionable
- Flexible joints
- All kinds of applications

Processing

Everad® TAC 2020 A + TAC 2013 B can be processed simply in three ways:

- Under gravity: Everad® TAC Easy Duo Box 2K
- Pressurized vessels: Everad® TAC Easy B25-SP1-2K
- Membrane pumps: Everad® TAC Easy Pump 2K

Example of application of Everad® 2C waterbased contact adhesive

Concept of the co-spraying of both components Everad® TAC 2020 A + TAC 2013 B

Everad® developed an exclusive system to increase the ageing resistance of the bonding.
