

**CELLULAR FOAMS**

# Everad® TAC Easy MDG 70

## Simple and effective spraying unit

**Simple, practical and effective**

The gluing of foam often calls for Everad® TAC 1K single component water-based contact adhesive technology. For maximum ease of use, Everad® has developed a simple, practical and effective spraying unit for this technology. It is the ideal solution for appreciating the high performance of Everad® TAC 1K single component adhesives and addressing all workers' job safety needs and environmental requirements.

**Everad® TAC Easy MDG 70 spraying unit**

The unit is made up of:

- A 70 litre under pressure tank with flexible dip probe and stainless steel fittings
- A rail for managing the spraying air and the adhesive pressure
- 1 or more one component guns

The 22 kg plastic can of single component Everad® TAC 1K adhesive is placed directly in the tank and the hose is inserted in the opening of the can. The system makes it possible to keep the tank clean and free of soiling.

**This process will offer you the following benefits :**

- Easy and fast installation and application
- Very easy installation of the plastic can in the pressurised tank
- Time is saved when the plastic can is replaced (no time lost pouring the adhesive in the tank)
- The machinery is kept absolutely clean
- Parts in contact with adhesive made of stainless steel or PVC
- Accurate and easily adjustable regulator gauges and filters
- Simple and low maintenance
